

DATASHEET

FACIAL LIGHTENING COMPLEX

lumino face

GENERAL DESCRIPTION

Minimizes pigmentation by inhibiting tyrosinase activity. Inhibits melanocyte activity at cellular nucleus level. Contains arbutin and liposomated vitamin C that in combination with silanol optimize lightening and protective action of cellular membrane and free anti-radicals.

COMPONENT	ACTIVITY
ARBUTIN LIPOSOMATED VITAMIN C SILANOL	Action at 3 levels to efficiently inhibit melanin production Melanocyte cellular wall: Blockage of MC1 receptors by antagonism Interruption of new melanin synthesis Melanocyte cellular nucleus: Inhibition of tyrosinase expression Interruption of new melanin synthesis Tyrosinase already produced: Blockage of its activity by similarity Interruption of new melanin synthesis Antioxidant and hydrating action Optimal cellular health for a healthy skin Restructuring action by collagen synthesis

HOW TO USE

Topic use, professional use.

NSOC66505-15CO
